SAND MIX

**EASY TO INSTALL -
SWEEP & SPRAY
WITH WATER**

**INHIBITS WEED
GROWTH**

**INHIBITS INSECT
INFESTATION**

**Available in:
20KG Bags**

Dunlop PaveFix is an easy-to-use, sweep-in sand binder perfect for locking pavers in place without the need for mortar. Designed for DIYers, it sets hard with just a light mist of water, helping to reduce weed growth and deter ants. Ideal for patios, paths, and paved areas with joints 2-4mm wide. Just sweep, spray, and walk away – no mess, no fuss!

KEY ADVANTAGES

- Helps prevent weed growth and ant infestations
- Sets with a light mist of water
- Easy sweep in application

TYPICAL USES

- Creates a stable yet flexible joint between pavers
- Suitable for patios, paths and courtyards
- Lowers maintenance as it inhibits weeds and insects

COVERAGE

COVERAGE: Dependent on joint width and depth between pavers - approximately 0.01m² per 20Kg bag

HOW TO USE:

- Ensure pavers are dry and clean before starting – no moisture or debris in joints.
- Sweep PaveFix into joints using a broom until they're fully filled (2-4mm wide gaps recommended).
- Compact the area to settle the product into the joints (use a plate compactor or hand tamper if available).
- Top up any low spots by sweeping in more product after compacting.

- Lightly mist with water to activate the binder – do not flood. A fine spray works best.
- Allow to dry and cure for 24 - 48 hours before walking or driving on the surface. Drying time will vary with weather.

PRODUCT LIMITATIONS

- Pavers must be completely dry before application – moisture can cause a white, milky film or discolouration.
- Not suitable for joints wider than 4mm or narrower than 2mm.
- Not recommended for steep slopes or areas with heavy traffic or high-water flow.
- Do not apply if rain is expected within 24 hours – product needs dry weather to set correctly.
- Always remove excess product from the paver surface before wetting to avoid staining or bonding to the surface.
- Not intended as a structural joint filler – decorative and stabilising use only.
